

Full Stack Developer (Python & Angular)

Nimbus Tech Solutions | Bangalore, India (Hybrid) | Experience: 3–5 years

About the Role

We're looking for a Full Stack Developer to join our product engineering team. You'll work across our Python/Flask backend and Angular frontend, building features end-to-end for our SaaS analytics platform used by mid-size retail businesses.

Responsibilities

- Design and build REST APIs using Python and Flask
- Develop responsive, component-based UIs in Angular
- Write and maintain unit and integration tests
- Collaborate with product and design teams to translate requirements into technical solutions
- Optimize database queries and troubleshoot performance issues in production
- Participate in code reviews and mentor junior developers
- Deploy and monitor services in a cloud environment (AWS preferred)

Required Skills

- Strong proficiency in Python, with hands-on experience in Flask or Django
- Solid experience with Angular (v14+) and TypeScript
- Working knowledge of relational databases (PostgreSQL or MySQL)
- Experience with RESTful API design and integration
- Familiarity with Git and collaborative development workflows
- Understanding of HTML, CSS, and responsive design principles

Nice to Have

- Experience with cloud platforms (AWS, GCP, or Azure)
- Familiarity with Docker and containerized deployments
- Exposure to CI/CD pipelines
- Experience integrating third-party APIs (payment gateways, AI/LLM APIs, etc.)
- Basic understanding of data analysis using pandas

What We Offer

- Competitive salary and performance bonuses
- Flexible hybrid work model
- Learning and development budget
- Health insurance for you and your family
